Description

Own a piece of computer history.

in 1974, Radio-Electronics ran an article about your own "minicomputer". I bought one and built it way back then. It's been in storage for at least 25 years.

Unit has all 6 boards that came with original kit, the output board is not populated.

I also have a 4k board that was made for this unit. Maximum memory for 8008 is 16k.

This unit worked when put away, but is not fully functional now. powers up, voltages are OK. AT least one LED in display is bad (I didn't know leds went bad).

Looks like input card may have problem, not all switch inputs get stored. Switches have been tested.

At this age, no warranty offered or implied.

Happy Bidding and good luck
